Company Profile

iCD. GmbH

Founded in 1986, the iCD. GmbH is specializing in the development of software and associated consulting for laboratories in the branches of process industry, civil service, energy and water supply.

Products of the iCD. GmbH are developed in Germany and distributed worldwide.

Associated companies and partners assume customer support at the face.

Economical success, sustainable solutions and fulfilling of customer requirements at the best possible rate are the announced business objectives. Accredited by DIN EN ISO 9001 since 1994, the quality management system of iCD. guarantees continuous profit.

Advancement of the products will be planned and specified in close cooperation with the customers. For this purpose iCD. offers continuous meetings of an elected user agency, called Task Force as well as an annual user meeting.

Employees

The iCD. GmbH engages 35 employees, most of them having academic educations in the fields of chemistry, informatics, mathematics or physics. Because of their experience in laboratory exercise and the know-how grown during a multitude of managed projects they will quickly and steadily comprehend the requirements of customers. Solutions will be realised practise oriented and efficiently. The customers benefit from short project run times and therefore from low expenses.

Customers

Worldwide, more than 300 companies of various braches apply solutions of the iCD. GmbH in the areas production, quality assurance as well as research and development. Installations span a broad spectrum of diverse systems, starting from single-user applications up to systems with more than 500 users.

Products

Focal points of application are the laboratory and information management system (LIMS) **LABS/Q®**, the add-on **LABS/R** for synthesis and recipe optimization which is based on **LABS/Q®**

the document management system **DMS**, the method validation tool **VALIDAT** and **LABS/DS**, a system for the development and documentation of agent releases.

Further products are **XCARDS**, a tool for the administration of quality control charts, **LabCost®** for costing of laboratories by means of the ABC method and **LabCos®**, a program for recipe management, preparation monitoring and quality inspection.
